Vol	luntary Results Feedback Form
>	I am an examiner in Workgroup: Example: 1610
>	Relevant prior art found , search results used as follows:
	☐ 102 rejection
	☐ 103 rejection
	Cited as being of interest.
	Helped examiner better understand the invention.
	Helped examiner better understand the state of the art in their technology.
	Types of relevant prior art found:
	☐ Foreign Patent(s)
	Non-Patent Literature (journal articles, conference proceedings, new product announcements etc.)
×	Relevant prior art not found:
	Results verified the lack of relevant prior art (helped determine patentability).
	Results were not useful in determining patentability or understanding the invention.

The present sequence represents the 5' end of clone 9, which encodes a TRAF2 binding protein. Clone 9 is a partial clone, which lacks most of TRAF2 binding protein. Clone 9 is a partial clone, which lacks most of the 5' end of the coding DNA sequence. A cDNA library prepared from B-c cells was screened for proteins that associate with TRAF2, and the call be actived as screened for proteins the clone 9 protein is capable of binding to at least amino acids 222-501 of TRAF2. The TRAF-2 binding proteins can be comediated or mediated or mediated by cany other intracellular signalling activity modulated or mediated by TRAF2. TRAF-binding proteins are especially used for prevention or TRAF2. TRAF-binding proteins are especially used for prevention or CC treatment of pathological conditions associated with NF-kB induction, c.g. acute hepatitis, autoimmune-induced cell death, e.g. death of the beta Langarhans cells or the pancreas that results in diabetes, the death of collection of graft rejection, the death of oligodendrocytes in the brain of multiple sclerosis, and AlDS-inhibited T cell suicide which causes C proliferation of the AlDS virus and hence the AlDS disease. The proteins are also useful for modulating cellular activity modulated/mediated by manch 3; 127pp; English Claim 4; Fig

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present cDNA sequence encodes human tumour necrosis factor (TNF)
receptor-associated factor (TRAP2) binding protein, IREN. A fragment of
this IREN molecule is capable of binding protein, IREN. A fragment of
this IREN molecules to human tumour necrosis factor (TNF)
501. The invention relates to human tumour necrosis factor (TNF)
receptor- associated factor (TRAP2) binding protein designated as IREN
(IKAPPAB REGULACO, its isoforms IREN-108, IREN-E and their
corresponding cDNA molecules. IREN is useful for modulating/mediating the
activity of transcription factor NF (Nuclear Factor)-kappaB or any other
intracellular signalling activity mediated by TRAP2. IREN is useful in
the prevention and treatment of a pathological condition associated with
NF-kappaB induction (abnormal) e.g. AIDS (acquired immune deficiency
syndrome), autoimmune diseases, tumours, rheumatic diseases, anorexia,
coeptic shock and graft-ve-host reactions IREN also plays an important
coll in the control of inflammation and other non-apoptocic effects of
TNF as well as in the control of apoptosis. The invention also relates to
method for screening, identifying and producing a molecule capable of
modulating activities mediated by IREN. IREN antibodies are useful for
the purification of new proteins from different sources, including cell

The present cDNA sequence encodes human tumour necrosis factor (TNF)
receptor-associated factor (TRAF2) binding protein isoform, IREN-E. A
fragment of this IRRN-E molecule is capable of binding protein
at position 225-501. The invention relates to human tumour necrosis
factor (TNF) receptor- associated factor (TRAF2) binding protein

CG designated as IREN (IRappaB REGulator), its isoforms IREN-10B, IREN-E and

CC designated as IREN (IRappaB REGulator), its isoforms IREN-10B, IREN-E and

CC their corresponding the activity of transcription factor NF (Nuclear

CC Factor) KappaB or any other intracellular signalling activity mediated by

CC TRAF2. IREN is useful in the prevention and treatment of a pathological

CO CONDITION (IRAPPAB PROVINCE), autoimmune diseases, tumours,

CC TRAF2. IREN is useful in the prevention and treatment of a pathological

CO CONDITION (IRAPPAB PROVINCE), autoimmune diseases, tumours,

CR CACQUIRED (IRAPPAB PROVINCE), autoimmune diseases, tumours,

CR CACQUIRED (IRAPPAB PROVINCE), and CALOR (IRAPPAB PROVINCE)

CR CONDITION (IRAPPAB PROVINCE), and CALOR (IRAPPAB PROVINCE)

CR Mediated by IREN IREN antibodies are useful for the purification of new

CC mediated by IREN IREN antibodies are useful for the purification of new

CC proteins from different sources, including cell extracts or transformed

CC mediated directly by TRAF proteins
                                                                                                                                  "Human TRAF2-binding protein isoform, IREN-E"
                                                                                                                                                                                                                                                                                                                                                                                                                                                        New DNA sequence encoding Tumor Necrosis Factor receptor associated factor (TRAF) binding proteins (IREN) for treatment or prevention of pathological conditions associated with NF-kappaB induction.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence 2873 BP; 756 A; 736 C; 806 G; 575 T; 0 U; 0 Other;

       modulating/mediating the activity of transcription factor NF (Nuclear Factor)-kappaB or any other intracellular signalling activity mediated by TRAF2. IREN is useful in the prevention and treatment of a pathological condition associated with NF-kappaB induction (abnormal) e.g. AIDS (acquired immune deficiency syndrome), autoimmune diseases, tumours, rheumatic diseases, anortain septic shock and graft-vs-host reactions. IREN also plays an important role in the control of inflammation and apportoric effects of TNF as well as in the control of apportoric. The invention also relates to method for screening, identifying and producing a molecule capable of modulating activities including by IREN. IREN antibodies are useful for the purification of new proteins from different sources, including cell extracts or transformed cell lines, in addition IREN can be used in diagnostic purposes for indentifying disorders related to abnormal functioning of cellular effects

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present invention describes primer sets for synthesising 5602 full-
length cDNAs defined in the specification. Where a primer set comprises:

(a) an oligo-dr primer and an oligonucleotide comprisentary to the
complementary strand of a polynucleotide which comprises one of the 5602
nucleotide sequences defined in the specification, where the
complementary strand of a polynucleotides, or (b) a combination
of an oligonucleotide comprising a sequence complementary to the
complementary strand of a polynucleotide which comprises a 5'-end
sequence and an oligonucleotide comprising a sequence complementary to a
polynucleotide which comprises at least 15 nucleotides and the combination of
the 5'-end sequence/3'-end sequence is selected from those defined in the
specification. The primer sets can be used in antisense therapy and in
specification and/or diagnosis of the abnormality of the proteins encoded by
the full-length cDNAs. The primers are also useful for the
detection and/or diagnosis of the abnormality of the proteins encoded by
the full-length cDNAs. The primers allow obtaining of the full-length
CDNAs easily without any specialised methods. AAH13612 to AAH13623 represent
the mann amino acid sequences; and AAH13629 to AAH13622 represent
configuration of the the complemences; AAH3622 represent
configuration of the which are used in the exemplification of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   196
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             316
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          141

The present invention describes primer sets for synthesising 5602 full[angth cDNAs defined in the specification, where a primer set comprises.
[a) an oligo-dr primer and an oligonucleotide complementary to the
complementary strand of a polynucleotide which comprises one of the 5602
[a) complementary strand of a polynucleotide which comprises one of the 5602
[c) ligonucleotide comprises at least 15 nucleotides, or (b) a combination
[c) of an oligonucleotide comprising a sequence complementary to the
[c) sequence and an oligonucleotide comprising a sequence complementary to a
[c) complementary strand of a polynucleotide which comprises a 3'-end sequence (c)
[c) complementary strand of a polynucleotide comprises a 0-end sequence (c)
[c) complementary strand of a polynucleotide comprises a 1'-end sequence (c)
[c) complementary strand of a polynucleotide on in oligonucleotide which comprises a 1'-end sequence (c)
[c) complementary strand of a polynucleotide on in an oligonucleotide which comprises at least 15 nucleotides and the combination of
[c) c) complementary strand of a polynucleotides and the comprises at least 15 nucleotides and the comprises
[c) c) dispuncleotide which comprises at least 15 nucleotides and the comprise of the primers are useful for synthesising polynucleotides,
[c) particularly full-length cDNAs. The primers are also useful for the
[c) complementary strbout any specialised methods. AAH13613 to AAH13628 and
[c) AAH13613 to AAH18742 represent human cDNA sequences; AAB92446 to AAH13628
[c) complementary strand and or dissequences, and AAH13629 to AAH13632 represent
[c) complementary strand and confidence used in the exemplification of the
[c) complementary strand and confidence used in the exemplification of the

Sequence 6045 BP; 1561 A; 1493 C; 1427 G; 1564 T; 0 U; 0 Other; 9 41.6%; Score 792.8; DB 4; Length 6045; 96.8%; Pred. No. 4.6e-205; Live 0; Mismatches 22; Indels 6; Conservative Best Local Similarity Matches 852; Conserv Query Match Best Local S

(HUMA-) HUMAN GENOME SCI INC.

Rosen CA, Barash SC, Ruben SM;

WPI; 2001-483426/52.

Nucleic acids encoding human immune/hematopoietic antigen polypeptides, useful for preventing, diagnosing and/or treating cancers and metastasis.

Disclosure; SEQ ID NO 22094; 3071pp + Sequence Listing; English.

AAK54951 to AAK64702 encode the human immune/haematopoietic antigen (I)

amino acid sequences given in AAM82170 to AAM91921. (I) have cytostatic
activity, and can be used in gene therapy and vaccine production. (I)
broteins and polynucleotides may be used in the prevention, diagnosis and
treatment of diseases associated with inappropriate (I) expression. For
example, they may be used to treat disorders associated with decreased
expression by rectifying mutations or delations in a patient's genome
that affect the activity of (I) by expressing inactive proteins or to
supplement the patients own production of (I). Additionally, (I)
co supplement the patients own production of (I). Additionally, (I)
co polymucleotides may be used to produce the secreted (I), by inserting the
mucleic acids into a host cell and culturing the cell to express the
concers and creat immune/haematopoietic-related diseases, especially
cancers and cancer metastases of haematopoietic antigen genomic
co AAK87F094 represent human immune/haematopoietic antigen genomic
sequences from the present invention. AAK54942 to AAK84950 and AAM82169
corporation in the exemplification of the present invention

genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations in diagnostics, forensics, gene mapping, identification of mutations and to produce other types of data and products dependent on DNA and amino acid sequences. AAS64197-AAS94564 represent novel human diagnostic coding sequences. AAS64197-AAS94564 represent novel human diagnostic patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO at the wipo int/pub/published_pot_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Human; gene trapped sequence; GTS; gene; ss; cancer; autoimmune disease; lupue; scleroderma; Crohm's disease; multiple sclerosis; immune disorder; inflammatory bowel disease; schizophrenia; psychosis; osteoarthritis; inflammatory disorder; diabetes; skin disorder; acne; eczema; asthma; rheumatoid arthritis; hypertension; atherosclerosis; Alzheimer's disease; cardiovascular disease; Parkinson's disease; osteoporosis; infertility; viral infection; parasitic infection; fungal infection; bacterial.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oilgomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed

                                                                                                                                                                                                                                           correspond to human gene trapped sequences (GTSS). The human GTSS are useful for gene discovery and as markers for gene expression analysis, for identifying and mapping the coding regions of the mammalian, particularly human, genome, for forensic analysis, and for determining the genetic basis of human disease. The peptides and proteins encoded by the genetic basis of human disease. The peptides and proteins encoded by the polynucleotides are useful for generating antibodies, as reagents in diagnostic assays and in identifying other cellular gene products involved in the regulation of development and cellular differentiation of various cell types. The peptides are also useful as reagents in assays for screening of compounds used in treating disorders affecting evelopment and cellular differentiation. The GTSs are also useful in treating or ameliorating disease associated with the expression of mutant or normal variants of the GTSs, e.g. cancer, autoimmune disease, lupus, scleroderma, Crohn's disease, multiple sclerosis, inflammatory bowel disease, immune disorders, schizophrenia, psychosis, inflammatory disorders, diabetes, skin disorders such as ache or eczema, cardiovascular disease, Alzheimer's disease, parkinson's disease, cardiovascular disease, Alzheimer's disease, parkinson's disease, batterial infections. This sequence represents a human GTS of the

The invention relates to a nucleic acid probe for measuring human gene expression, comprising any of the 27,400 fully defined nucleotide sequences in the specification, or their complements or fragments, and sequences in the specification, or their complements or fragments, and encoding at least 8 amino acids of any of the 6888 amino acid sequences fully defined in the specification. The probe is a single exon probe that hybridises under high stringency conditions to a nucleic acid molecule expressed in human cells or tissues. Also included are a spatially.

CC addressable set of single exon nucleic acid probes for measuring human cells a purality of single exon nucleic acid probes for measuring human gene expression, a method of comprising a plurality of single exon microarray for measuring human gene expression, a wector comprising the single exon probes cited above, an ORF-encoded peptide comprising at least 8

CC exon microarray for measuring human gene expression, a method of solid above.

CC exon microarray for measure gene expression, a method of solid any of the above- mentioned amino acid solid any of single exon probes of selling and/or licensing single exon probes or microarrays to sequences (optionally with conservative amino acid substitutions), an order desiring to measure gene expression, a method of providing any or sequence desiring to measure gene expression of a single exon probe created antibody that binds specifically to a peptide cited above.

CC a customer desiring to measure gene expression of a single exon probe created method of selling and on the expression of a single exon probe created and a by subscription, and a computer-readable created accorage medium which contains a database having a plurality of records (extression analysis. The probes may be used as tools for surveying tissues to detect the presence of expressed measures are useful in gene attentions in the genomic alterations in the genomic alterations in the genomic learned by probes or the inventor services of maller geno
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New human genome-derived single exon nucleic acid probes useful for human gene expression analysis, for identifying or characterizing alternative splicing events, for assessing genomic alterations or as tools for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gaps
Human, probe, ss, gene expression, single exon probe, microarray, alternative splicing event, genomic alteration.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Score 215.8; DB 12; Length 542;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              surveying tissues.
                                                                                                                                                                                                                                      US2003194704-A1
                                                                                                                                                   Homo sapiens
                                                                                                                                                                                                                                                                                                                             16-OCT-2003
```

```
The invention relates to a nucleic acid probe for measuring human gene expression, comprising any of the 27,400 fully defined nucleotide sequences in the specification, or their complements or fragments, and encoding at least 8 amino acids of any of the 6888 amino acid sequences (ully defined in the specification. The probe is a single exon probe that hybridises under high stringency conditions to a nucleic acid molecule cypressed in human cells or tissues. Also included are a spatially-addressable set of single exon nucleic acid probes for measuring human expression (comprising a plurality of single exon nucleic acid probes cited above, where each of the plurality of probes is separately and addressably isolatable or amplifiable from the plurality), a single exon microarray for measuring human gene expression, a method of measuring human gene expression, a vector comprising the single exon probe cited above, an ORF-encoded peptide comprising at least 8 contiguous amino acids of any of the above- mentioned amino acid
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New human genome-derived single exon nucleic acid probes useful for human gene expression analysis, for identifying or characterizing alternative splicing events, for assessing genomic alterations or as tools for

sequences (optionally with conservative amino acid substitutions), an isolated antibody that binds specifically to a peptide cited above, methods of selling and/or licensing single exon probes or microarrays to a customer desiring to measure gene expression, a method of providing human gene expression data by subscription, and a computer-readable storage medium which contains a database having a plurality of records card including data on the expression of a single exon probe cited above. The probes may be used as tools for surveying tissues to detect the presence of expressed messages that contain their specific exon, or in constructing genome-derived single exon microarrays. In addition, the probes are used in identifying and characterising alterations in the genomic locus that includes their exon, in assessing smaller genomic alterations, in priming the synthesis of nucleic acids, or in expressing the ORF-enceded peptide. The present sequence is a human single exon probe of the invention. Note: The sequence data for this caingle controlic form part of the printed specification, but was obtained in electronic format directly from USPTO at

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         CCAGAGGACCACGTTCTCCCGGATCCTGGACTTCGGTACAGTGTGGAAGCCAGCTCTCCA 1453
                                                                                                                                                                                      The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain recaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        294 CCAGAGGACCACGTTCTCCCAGATCCTGGACTTCGGTACAGTGTGGAAGCCAGCTCTCCA 353

The invention relates to isolated polymucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polymucleotides are also used in diagnostics as expressed sequence tags for identifying expressed cartivity of (II) as useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food polypeptide in tissue, as molecular weight markers and as a food of sites expressing (II). (II) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polymucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations capponable for genetic disorders or other traits to assess produces ity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            297

The present sequence is one of a large number of 5' ESTS derived from mRNAs encoding secreted proteins. No ORF has yet been conclusively identified within the present sequence. The 5' ESTS were prepared from total human RNAs or polyA+ RNAs derived from 30 different tissues. EST sequences usually correspond mainly to the 3' untranslated region (UTR) of the mRNA because they are often obtained from oligo-dT primed cDNA libraries. Such ESTS are not well suited for isolating cDNA sequences derived from the 5' ends and even in those cases where longer CDNA sequences have been obtained, the full 5' UTR is rarely included. 5' ESTS are defived from mRNAs with intact 5' ends and can therefore be used to obtain full length cDNAs and genomic DNAs. 5' ESTS are also used in diagnostic, forensic, gene therapy and chromosome mapping procedures.
                                                                                 numan; s' EST; expressed sequence tag; secreted protein; cDNA isolation;
gene therapy; chromosome mapping; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                 New nucleic acid that is a 5' expressed sequence tag (5' EST) for obtaining cDNAs and genomic DNAs that correspond to 5'ESTs and for diagnostic, forensic, gene therapy and chromosome mapping procedures.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Claim 1; SEQ ID NO 16002; 71pp + Sequence Listing; English.

Sequence 201, Application US/09563817

Patent No. US20020095031A1

GENERAL INFORMATION:

APPLICANT: Lambrowicz, Brian

APPLICANT: Sands, Arthur T.

TITLE OF INVENTION: No. US20020095031A1e1 Human Polynucleotides and the

TITLE OF INVENTION: Polypeptides Encoded Thereby

FILE REFERENCE: LEX-0021-US-11

CURRENT FILING DATE: 2001-06-11

PRIOR APPLICATION NUMBER: US 60/132,343

PRIOR FILING DATE: 1999-05-04

NUMBER OF SEQ ID NOS: 1008

SOFTWARE: FastSEQ for Windows Version 4.0

SEQ ID NO 201

UT-B-CK1 is a normalized cDNA library containing the following tissue(s): Retina Foveal and Macular. The library was constructed according to Bonalo. Lennon and Soares, Genome Research, 6:791-806, 1996. First strand cDNA synthesis was primed with an oligo-dT primer containing a Not I site. Double stranded cDNA was ligated to an EcoR I adaptor, digested with Not I, and cloned directionally into pT7T3-Pac vector. The oligonucleotide used to prime the synthesis of first-strand cDNA contains a library as sequence that is located between the Not I site and the (dT)18 tail. The sequence tag for this library is GTCC. This library was created for the program, Gene Discovery in the Visual System, supported by National
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         1334
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   1454

modified polylinker; Site 1: EcoR I; Site 2: Not I;
UI-B-ED1 is a subtracted CDNA library constructed
according to Bonaldo, Lennon and Soares, Genome Research,
6:791-806, 1996. First strand CDNA synthesis was primed
with an oligo-dT primer containing a Not I site. Double
stranded CDNA was ligated to an EcoR I adaptor, digested
with Not I, and cloned directionally into pT773-Pac
vector: The oligonodleocide used to prime the synthesis of
first-strand cDNA contains a library tag sequence that is
located between the Not I site and the (dT)! B tail. The
sequence tags for this library are: fetal eyes,
AGANTCAAGA; lens, CGATTAGCGA; eye anterior segment,
AATGCGCAT; optic nerve, CCATTAAGTG; retina, CCGCG; Retina
Foveal and Macular, GTCC; RPE and Choroid, ACCTA. This
library was created for the program, Gene Discovery in the
Visual System, supported by National Eye Institute (NEI).
